

FIKZDEV

Master Plan Website, SEO & Cursor Implementation

Pelan lengkap untuk fikzdev.com

Bahasa utama: Bahasa Melayu

Pasaran utama: Malaysia

Strategi: SEO + lead generation + long-term authority

Stack utama: Next.js 16.x Active LTS + TypeScript + Tailwind

Disediakan untuk pembangunan menggunakan Cursor

Tarikh pelan: 18 September 2026

Ringkasan Eksekutif

FikzDev akan dibina sebagai aset jualan dan SEO jangka panjang, bukan sekadar portfolio freelancer. Versi pertama menggunakan Bahasa Melayu untuk pasaran Malaysia, dengan fokus kepada servis pembangunan website, WordPress dan Elementor, custom coded website, SEO, website maintenance, pengurusan domain dan managed hosting.

Strategi utama ialah membina halaman komersial yang kuat terlebih dahulu, kemudian guides yang menjawab soalan sebenar pelanggan, dan seterusnya local SEO secara terkawal. Halaman lokasi tidak boleh dihasilkan secara massal dengan copy yang sama kerana pendekatan tersebut berisiko menjadi doorway atau scaled content yang tidak memberi nilai.

FikzDev sendiri perlu menjadi bukti kualiti servis yang dijual: responsive pada semua peranti, pantas, accessible, secure, technical SEO lengkap dan mempunyai copywriting yang terus terang tanpa hype atau dakwaan palsu.

Cursor akan dikawal melalui AGENTS.md, dokumentasi projek dan rules khusus supaya agent tidak mengubah tone, SEO strategy, design system atau security baseline secara sesuka hati.

KEPUTUSAN V1

Bahasa Melayu dahulu. Core service pages dahulu. Lead form ringkas. SEO dibina dari awal. Local SEO berkembang berdasarkan data. Tidak bina CRM, chatbot atau ratusan halaman lokasi dalam versi pertama.

1. Gambaran Keseluruhan Projek

Projek

Nama: FikzDev

Domain: fikzdev.com

Pasaran: Malaysia

Bahasa V1: Bahasa Melayu

Matlamat utama

FikzDev perlu menjadi aset pemasaran dan jualan jangka panjang, bukan sekadar portfolio. Website perlu membantu bakal pelanggan memahami servis, menilai kesesuaian, melihat anggaran kos dan menghantar enquiry dengan mudah.

Sasaran pengguna

- Pemilik SME
- Bisnes servis
- Consultant
- Contractor
- Firma engineering
- Klinik dan perniagaan profesional
- Syarikat yang mempunyai website lama atau perlahan
- Syarikat yang perlukan website tetapi tidak mahu mengurus perkara teknikal
- Bisnes yang mahu mula atau memperbaiki SEO

Masalah utama pengguna

- Tidak tahu berapa kos sebenar buat website
- Takut kena caj tambahan selepas projek bermula
- Website sedia ada perlahan, tidak kemas atau tidak responsive
- Tidak tahu beza WordPress dan custom website
- Tidak tahu hosting dan domain perlu diurus bagaimana
- Tidak tahu sama ada SEO berbaloi
- Pernah guna freelancer atau vendor yang susah dihubungi
- Website ada tetapi tidak menghasilkan enquiry

Hasil yang perlu dicapai

- Pengguna faham apa FikzDev buat dalam beberapa saat pertama.
- Setiap halaman ada CTA yang jelas.
- Harga permulaan atau cara harga ditentukan diterangkan dengan telus.
- Pengguna boleh pilih laluan WordPress atau custom tanpa dipaksa.
- Borang enquiry ringkas tetapi cukup untuk qualify lead.
- Semua halaman utama boleh dicrawl dan difahami search engine.
- Struktur site boleh berkembang mengikut servis, negeri dan lokasi tanpa menghasilkan spam.

Bukan objektif V1

- Bukan bina CRM penuh.
- Bukan bina client portal.
- Bukan bina AI chatbot kompleks.
- Bukan bina multilingual lagi.
- Bukan generate ratusan location pages.
- Bukan blog berskala besar sebelum core pages siap.

2. Model Bisnes dan Servis

Positioning

FikzDev membantu bisnes di Malaysia membina dan menjaga website yang jelas, laju, profesional dan mudah membawa pelanggan kepada tindakan.

Prinsip komersial utama ialah cadangkan apa yang pelanggan perlukan, bukan menambah skop semata-mata untuk menaikkan harga.

Servis utama

1. WordPress dan Elementor

Sesuai untuk pelanggan yang perlukan CMS mudah, fleksibel dan mudah diurus selepas launch.

Skop boleh termasuk:

- Corporate website
- Service website
- Landing page
- Blog atau resource section
- Contact form
- WhatsApp CTA
- Basic technical SEO
- Performance tuning

2. Custom Coded Website

Sesuai untuk pelanggan yang perlukan performance, design control, integration atau fungsi yang lebih custom.

Teknologi utama untuk projek FikzDev sendiri ialah Next.js + TypeScript. Stack client boleh berubah berdasarkan keperluan.

3. SEO

SEO mesti dijual sebagai proses memperbaiki kebolehfahaman, relevansi, technical health dan visibility website. Jangan janjikan nombor satu Google atau tempoh ranking yang pasti.

4. Website Maintenance

Boleh merangkumi:

- Update plugin atau dependency
- Backup
- Monitoring
- Security checks
- Content changes kecil
- Bug fixes
- Performance checks

5. Domain Registration and Management

Gunakan istilah "Pendaftaran dan Pengurusan Domain" pada public copy.

Terangkan bahawa domain biasanya diperbaharui mengikut tempoh pendaftaran dan bukan dimiliki selama-lamanya tanpa renewal.

6. Managed Hosting

FikzDev mengurus konfigurasi hosting, SSL, backup dan perkara teknikal yang dipersetujui dalam pakej.

Cadangan harga permulaan untuk V1

Harga ini ialah anchor awal dan boleh diubah kemudian berdasarkan kos sebenar serta kapasiti operasi.

- Landing page: dari RM800
- WordPress business website: dari RM1,500
- Custom coded website: dari RM2,500
- SEO: dari RM800 sebulan
- Website maintenance: dari RM199 sebulan
- Domain dan hosting: quotation berdasarkan pilihan dan resource

Prinsip pricing

- Nyatakan apa yang termasuk.
- Nyatakan apa yang tidak termasuk.
- Nyatakan kos recurring jika ada.
- Jangan sembunyikan renewal hosting atau domain.
- Jangan janji unlimited revision jika sebenarnya ada had.
- Scope change perlu quotation atau approval tambahan.

Revenue jangka panjang

Fokus V1 ialah project revenue + recurring revenue.

Project revenue:

- Website
- Landing page
- SEO setup
- Migration

Recurring revenue:

- Maintenance
- Managed hosting
- SEO retainer
- Domain management

Upsell selepas V1

Hanya selepas operation stabil:

- Lead dashboard
- Automation

- CRM ringan
- AI knowledge assistant
- Quotation tools
- Client portal

3. Brand dan Positioning

Personaliti

FikzDev perlu kelihatan:

- Jelas
- Tenang
- Moden
- Practical
- Telus
- Boleh dipercayai
- Technical tetapi mudah difahami

FikzDev tidak perlu kelihatan seperti agency besar yang penuh hype.

Brand promise

Kami akan membantu pelanggan memahami pilihan yang ada, apa yang mereka perlukan, apa yang tidak diperlukan dan apa yang mereka bayar.

Tone of voice

Gunakan ayat ringkas dan manusia.

Bercakap seperti seseorang yang memahami masalah bisnes, bukan seperti brosur korporat.

Contoh sesuai

"Kalau website mudah sudah cukup untuk bisnes anda, kami tidak akan paksa anda ambil sistem yang lebih mahal."

"Tak pasti WordPress atau custom website lebih sesuai? Ceritakan apa yang anda perlukan. Kami akan terangkan pilihan yang paling praktikal."

"Harga dan skop diterangkan sebelum kerja bermula supaya anda tahu apa yang termasuk."

Elakkan

- Di era digital yang serba pantas
- Solusi inovatif
- Transformasi digital
- Tingkatkan kehadiran digital anda
- Unlock your potential
- Seamless digital experience
- Website bukan sekadar website
- Game changer
- Revolutionary
- Best in Malaysia
- No. 1 agency

Bahasa

Primary public language ialah Bahasa Melayu Malaysia.

English technical terms dibenarkan apabila lebih natural:

- website
- WordPress
- Elementor
- SEO
- hosting
- domain
- web development
- landing page
- maintenance
- responsive

Elakkan Bahasa Melayu yang terlalu formal atau terjemahan literal yang orang biasa tidak guna.

Visual direction

Minimalist, editorial dan premium.

Rujukan rasa visual: Linear, Stripe dan Apple dari segi hierarchy, spacing dan restraint sahaja. Jangan tiru layout atau identiti mereka.

Visual anti-patterns

- Gradient berlebihan
- Glassmorphism di setiap section
- Animasi berat
- 3D icon rawak
- Stock photo generic orang senyum dengan laptop
- Card terlalu banyak
- Shadow berat
- Teks terlalu kecil
- Semua benda rounded secara keterlaluan

4. Peraturan Copywriting

Matlamat copy

Public copy perlu membantu pengguna:

1. Faham masalah.
2. Faham pilihan.
3. Faham apa yang FikzDev boleh bantu.
4. Faham anggaran kos atau cara quotation dibuat.
5. Tahu tindakan seterusnya.

Style

- Natural Bahasa Melayu Malaysia.
- Pendek tetapi cukup maklumat.
- Specific lebih baik daripada hype.
- Explain trade-off secara jujur.
- Fokus kepada outcome yang boleh dikawal.
- Boleh guna "kami" untuk brand voice.
- Jangan guna em dash dalam public copy.
- Jangan berlebihan dengan tanda seru.
- Jangan letak keyword semata-mata untuk SEO.

AI slop blacklist

Jangan gunakan frasa berikut melainkan benar-benar perlu dalam konteks khusus:

- di era digital
- solusi inovatif
- transformasi digital
- kehadiran digital yang mantap
- ke tahap seterusnya
- seamless
- revolusioner
- unlock
- potensi tanpa batasan
- all in one solution
- one stop solution
- game changer
- bukan sekadar

Trust rules

Jangan cipta:

- jumlah customer
- jumlah project
- awards
- years of experience
- testimonial

- client logo
- ranking result
- traffic growth percentage
- revenue improvement

Jika tiada bukti, jangan tulis.

SEO copy

Keyword perlu muncul kerana ia natural dan relevan, bukan kerana perlu capai density tertentu.

Utamakan search intent.

Contoh page "Servis Buat Website":

Pengguna biasanya mahu tahu:

- Apa yang akan dibina
- Berapa harga
- Berapa lama
- WordPress atau custom
- Apa perlu disediakan
- Domain dan hosting termasuk atau tidak
- Siapa pegang website selepas siap
- Apa berlaku selepas launch

Jawab soalan ini dahulu sebelum menambah panjang content.

CTA vocabulary

Gunakan CTA yang jelas:

- Dapatkan Cadangan dan Harga
- Ceritakan Keperluan Projek
- Minta Sebut Harga
- Semak Pilihan Website
- Tanya Tentang Projek
- Hantar Keperluan Projek

Elakkan CTA kabur:

- Learn More
- Discover
- Explore More
- Unlock Now

Pricing copy

Contoh:

"Harga bermula dari RM1,500. Harga sebenar bergantung pada bilangan halaman, fungsi, integrasi dan skop content. Kami akan terangkan apa yang termasuk sebelum kerja bermula."

SEO claims

Jangan tulis:

"Kami pastikan website anda rank No.1 Google."

Gunakan:

"Kami susun technical SEO, struktur content dan asas on-page supaya search engine lebih mudah memahami website anda. Ranking tetap bergantung kepada persaingan, kandungan, authority dan faktor lain yang berubah dari semasa ke semasa."

5. Strategi SEO

Objektif

Membina organic visibility yang membawa enquiry berkualiti di Malaysia tanpa bergantung kepada thin content, keyword stuffing atau mass generated location pages.

Prinsip

Google menerangkan SEO sebagai usaha membantu search engine memahami content dan membantu pengguna membuat keputusan sama ada mereka patut melawat sesuatu hasil carian. Google juga menyatakan tiada rahsia yang menjamin ranking pertama.

Rujukan rasmi:

- <https://developers.google.com/search/docs/fundamentals/seo-starter-guide>
- <https://developers.google.com/search/docs/essentials/spam-policies>

Search intent utama

Transactional dan commercial

- buat website
- servis buat website
- web developer malaysia
- web design malaysia
- harga buat website
- website untuk bisnes
- wordpress malaysia
- custom website malaysia
- servis seo malaysia
- website maintenance malaysia
- domain hosting malaysia

Informational with commercial potential

- berapa harga website
- wordpress atau custom website
- domain dan hosting apa beza
- berapa lama buat website
- kenapa website lambat
- kenapa website tak keluar google
- seo ambil masa berapa lama
- kos maintenance website

Architecture

National service pages ialah pillar commercial pages.

Location pages support local intent.

Guides support informational intent dan internal linking.

URL principles

- Lowercase
- Pendek
- Descriptive
- Elakkan query parameter untuk core content
- Elakkan tarikh dalam URL evergreen

Contoh:

/servis/buat-website

/servis/seo

/harga-website

/kawasan/selangor/shah-alam

/panduan/harga-buat-website-malaysia

On-page requirements

Setiap indexable page mesti mempunyai:

- Unique title
- Unique meta description
- Satu H1 yang jelas
- Logical H2 dan H3
- Search intent yang jelas
- Human readable content
- Internal links
- Useful CTA
- Canonical
- Open Graph metadata
- Appropriate structured data apabila benar-benar sesuai

Technical SEO

Implement:

- `robots.ts`
- `sitemap.ts`
- canonical URL
- metadata generation
- semantic HTML
- crawlable internal links
- correct status codes
- custom 404
- redirects apabila slug berubah
- image dimensions
- meaningful alt text
- noindex untuk staging atau private pages

Sitemap

Sitemap tidak sepatutnya mengandungi:

- redirect URLs
- 404 pages
- noindex pages
- staging URLs
- duplicate canonical URLs

Internal linking

Service pages link kepada:

- pricing
- relevant guides
- relevant location hub
- contact

Guides link kembali kepada service page secara natural.

Location pages link kepada relevant core service page dan nearby or parent location pages jika berguna.

Content quality gate

Jangan publish page jika:

- hanya tukar nama bandar
- tiada maklumat unik
- tiada search intent nyata
- copy terlalu generik
- dibuat semata-mata untuk menambah page count
- tiada value melebihi page utama

Measurement

Selepas launch gunakan:

- Google Search Console
- GA4 atau analytics yang dipilih
- Core Web Vitals field data
- Enquiry conversion tracking

KPI awal:

- Indexed core pages
- Impressions
- Non-brand clicks
- Leads
- Lead conversion rate
- Search queries yang menghasilkan lead
- Pages dengan impressions tetapi CTR rendah
- Pages ranking tetapi tidak convert

Traffic sahaja bukan KPI utama.

6. Strategi Local SEO Malaysia

Matlamat

Mendapatkan visibility untuk carian perkhidmatan mengikut negeri, bandar, daerah dan kawasan apabila wujud search demand dan page boleh memberi nilai unik.

Perkara yang dilarang

Jangan generate ratusan halaman seperti:

/website-shah-alam

/website-klang

/website-pj

jika kandungan hanya menukar nama lokasi.

Google menyenaraikan multiple pages yang mensasarkan bandar atau region tertentu dan funnel pengguna ke destinasi sama sebagai contoh doorway abuse. Google juga melarang scaled content yang dihasilkan dalam jumlah besar terutama apabila tidak memberi nilai unik kepada pengguna.

Rujukan:

<https://developers.google.com/search/docs/essentials/spam-policies>

Hierarki lokasi

Gunakan hierarchy browseable:

/kawasan

/kawasan/selangor

/kawasan/selangor/shah-alam

/kawasan/selangor/klang

/kawasan/selangor/puncak-alam

Kemudian negeri lain berdasarkan priority dan data.

Rollout

Fasa 1

Selangor + Kuala Lumpur kerana dekat dengan operasi dan mudah membina content yang genuine.

Cadangan awal:

- Shah Alam
- Klang
- Puncak Alam
- Petaling Jaya
- Subang Jaya
- Puchong
- Bangi

- Kuala Lumpur
- Bangsar
- Cheras
- Kepong

Fasa 2

Bandar utama berdasarkan impressions, enquiry dan keyword research.

Contoh:

- Johor Bahru
- Melaka
- Seremban
- Ipoh
- Georgetown
- Kota Bharu
- Kuala Terengganu
- Kuantan
- Kota Kinabalu
- Kuching

Unique value requirement

Sebelum publish local page, page mesti ada beberapa elemen unik yang benar-benar membantu pengguna. Contohnya:

- Jenis bisnes yang biasa terdapat atau sesuai ditarget di kawasan tersebut
- Common project needs
- Cara servis remote atau on-site dijalankan
- Service coverage
- Local FAQs
- Relevant example atau case study apabila sudah ada
- Links kepada panduan yang berkaitan
- Harga atau process yang jelas

Jangan mereka statistik tempatan.

Google Business Profile

Gunakan satu profil yang benar-benar mewakili bisnes.

Jangan cipta profile palsu untuk setiap bandar.

Jika beroperasi sebagai service area business dan pelanggan tidak datang ke premis, ikut garis panduan Google Business Profile berkaitan alamat dan service area.

Local page schema

Jangan tambah LocalBusiness schema dengan alamat palsu.

Structured data mesti sama dengan fakta yang benar-benar dipaparkan kepada pengguna.

7. Content Architecture

Core sitemap V1

Main

- `/
- `/servis`
- `/harga-website`
- `/projek`
- `/panduan`
- `/kawasan`
- `/tentang`
- `/hubungi`
- `/privasi`
- `/terma`

Service pages

- `/servis/buat-website`
- `/servis/wordpress-elementor`
- `/servis/custom-website`
- `/servis/seo`
- `/servis/maintenance-website`
- `/servis/domain-hosting`

Homepage structure

6. Header
7. Hero
8. Trust statement
9. Problem and value section
10. Main services
11. WordPress vs custom website explainer
12. Why FikzDev
13. Process
14. Starting prices
15. What we build / concept projects
16. FAQ
17. Final CTA
18. Footer

Service page structure

19. Search aligned hero
20. Who this service is for
21. Problem explanation
22. What is included
23. What is not included
24. Process

- 25. Pricing approach
- 26. Relevant FAQs
- 27. Related guide links
- 28. CTA

Guide structure

- 29. Direct answer near top
- 30. Context
- 31. Options
- 32. Pros and cons
- 33. Price or practical implications where applicable
- 34. Mistakes to avoid
- 35. FAQ if useful
- 36. Natural link to relevant service

Project section before real portfolio exists

Do not fake portfolio.

Use clearly labelled concept projects or internal demonstrations.

Possible demo categories:

- Solar company
- Engineering consultant
- Clinic or professional service

Label clearly as "Projek Konsep" or "Demo" until replaced by real client work.

Future English architecture

Do not implement in V1.

Recommended future pattern:

- Bahasa Melayu remains root
- English uses `/en/...`
- Add proper language alternates and hreflang only when translations are manually reviewed

8. Design System

Direction

Minimal, clean, premium and conversion focused.

The interface should communicate competence through clarity, spacing and typography rather than effects.

Layout

- Max content width: approximately 1200 to 1280px
- Text reading width: approximately 680 to 760px
- Use generous responsive gutters
- Use CSS Grid and Flexbox
- Avoid fixed heights for content sections
- Components must tolerate longer Bahasa Melayu copy

Responsive breakpoints

Do not design only around specific devices. Components should be intrinsically responsive.

Still verify at:

- 320px
- 360px
- 390px
- 430px
- 768px
- 1024px
- 1280px
- 1440px
- 1920px

Fluid typography

Use clamp() for headings, body text and major spacing where practical.

Example direction:

```
:root {  
  --text-body: clamp(1rem, 0.96rem + 0.2vw, 1.125rem);  
  --text-h3: clamp(1.25rem, 1.1rem + 0.8vw, 1.75rem);  
  --text-h2: clamp(1.75rem, 1.25rem + 2vw, 3rem);  
  --text-h1: clamp(2.35rem, 1.6rem + 3.5vw, 4.8rem);  
  --section-space: clamp(4rem, 2rem + 6vw, 8rem);  
}
```

Exact values can be refined during visual testing.

Typography

Recommended first option: Geist.

Alternatives: Inter or Manrope.

Use next/font or locally optimised font loading.

Colour system

Keep palette small.

Suggested starting point:

- Background: warm white or clean white
- Text: near black
- Muted text: neutral grey
- Border: light neutral
- Primary accent: one distinctive brand colour
- Error: accessible red
- Success: accessible green

Final colour tokens must pass contrast checks.

Components

Core components:

- Header
- Mobile navigation
- Button
- Link
- Container
- Section wrapper
- Service card
- Pricing card
- FAQ accordion
- Breadcrumb
- Lead form
- Callout
- Footer
- Project card

Buttons

Primary button should be visually obvious without oversized styling.

Minimum touch target should meet accessibility guidance.

Avoid putting 3 or 4 competing CTAs in one section.

Motion

Motion is optional, not required.

Use only when it improves understanding.

Respect prefers-reduced-motion.

Avoid animation libraries until native CSS or small utilities are proven insufficient.

9. Technical Stack

Application

- Next.js 16.x Active LTS
- TypeScript
- App Router
- Tailwind CSS

As of the current planning date, Next.js 16.x is listed as Active LTS by the official support policy.

Reference:

<https://nextjs.org/support-policy>

Do not pin the architecture document to a specific patch forever. Use the latest secure stable patch in the supported major version when implementing or updating.

Rendering strategy

Prefer:

- Static rendering for evergreen marketing pages
- Server Components by default
- Client Components only for interactions that require them
- Dynamic rendering only when the feature genuinely needs runtime data

Data

Supabase for lead storage in V1.

Rules:

- Service role keys server side only
- Use least privilege
- Avoid storing unnecessary personal data
- Define retention and deletion practices before collecting more fields

Forms

- Zod for server validation
- Cloudflare Turnstile for bot protection
- Honeypot as additional low-cost spam layer
- Rate limiting on submissions
- Resend for transactional notification email

Analytics

Initial:

- Google Search Console
- GA4 if required for marketing measurement

Keep third-party scripts minimal.

Content

V1 can use typed local content or MDX for guides.

Do not add a CMS until content management needs justify the operational complexity.

Package policy

Before adding a dependency ask:

- 37. Is this already possible with platform or browser APIs?
- 38. Is the package maintained?
- 39. Does it add meaningful bundle cost?
- 40. Does it create security or licensing risk?
- 41. Can the requirement be solved with a small internal utility?

Code quality

- Strict TypeScript
- ESLint
- Formatting standard
- Consistent naming
- Small reusable components
- No giant all-purpose components
- Server and client boundaries kept explicit
- Environment variables validated

10. Security Baseline

Security is part of the architecture, not a post-launch task.

Official reference:

<https://cheatsheetseries.owasp.org/cheatsheets/HTTP-Headers-Cheat-Sheet.html>

Headers

Review and implement appropriate values for:

- Content-Security-Policy
- Strict-Transport-Security after HTTPS is stable and deployment behaviour is understood
- X-Content-Type-Options
- Referrer-Policy
- Permissions-Policy
- Frame protection through CSP `frame-ancestors`

Do not copy a CSP blindly. It must match actual resources used by the website.

Forms

Every lead form must have:

- Server-side schema validation
- Length limits
- Normalisation where appropriate
- Bot protection
- Rate limiting
- Honeypot
- Safe error messages

Do not trust browser validation alone.

Secrets

Never commit:

- API keys
- Supabase service role key
- Turnstile secret
- Resend API key
- database credentials

Use environment variables.

Create .env.example containing names only, never live values.

Supabase

- Use least privilege
- Enable RLS where browser-side access exists
- Prefer server-side insert for public lead forms
- Do not expose private lead lists publicly

- Restrict admin features if added later

Personal data

Collect the minimum required for an enquiry.

Avoid requesting NRIC, financial documents or sensitive personal data in a normal website quotation form.

Provide privacy information explaining what lead information is collected and why.

Dependency security

- Keep supported framework versions
- Update security patches
- Review dependency alerts
- Avoid abandoned packages
- Remove unused packages

Deployment

- HTTPS only
- Production environment variables separated from preview
- Staging should not be indexed
- Protect preview environments containing private information
- Do not expose debug output or stack traces to users

Logging

Do not log secrets or full sensitive form payloads unnecessarily.

Use request identifiers where helpful.

11. Accessibility

Target: WCAG 2.2 AA where reasonably applicable.

Official reference:

<https://www.w3.org/TR/WCAG22/>

Requirements

- Semantic HTML
- Correct heading structure
- Keyboard accessible navigation
- Visible focus states
- Sufficient colour contrast
- Form labels
- Helpful validation messages
- Alternative text for meaningful images
- Decorative images hidden from assistive technology
- Buttons used for actions, links used for navigation
- Skip link where appropriate
- No essential information communicated by colour alone
- Respect reduced motion preferences

Forms

- Labels must remain available after the field contains text
- Error text should identify the affected field
- Required fields clearly indicated
- Do not rely only on placeholder text
- Ensure input autocomplete attributes are appropriate

Mobile accessibility

- Touch targets must be comfortably usable
- Avoid horizontal scrolling
- Avoid fixed overlays that cover content
- Sticky CTAs must not block important controls

Testing

Use a mix of:

- Keyboard-only navigation
- Browser accessibility tree inspection
- Automated accessibility checks
- Manual contrast checks
- Screen reader spot checks for core conversion flows

12. Lead Generation

Goal

Generate fewer but better enquiries rather than maximise form volume without context.

Primary funnel

Search or direct visit

-> Service, location or guide page

-> Clear explanation and pricing context

-> CTA

-> Qualification form

-> Confirmation

-> Notification to FikzDev

-> Manual follow-up

Form fields V1

Required where practical:

- Nama
- Nama bisnes
- Servis diperlukan
- Bajet anggaran
- Ringkasan keperluan
- Nombor telefon atau WhatsApp
- Email

Optional:

- Website sedia ada

Do not make all fields mandatory without reason.

Budget choices

Use ranges that help qualification without sounding judgmental. Example:

- Bawah RM1,000
- RM1,000 hingga RM2,500
- RM2,500 hingga RM5,000
- RM5,000 ke atas
- Belum pasti

These can be adjusted after real lead data is available.

Confirmation copy

After submission, explain clearly what happens next.

Do not promise response times that cannot consistently be met.

Tracking

Track events such as:

- primary_cta_click
- whatsapp_click
- lead_form_start
- lead_form_submit_success
- lead_form_error

Avoid collecting unnecessary personal data in analytics events.

Lead quality signals

Useful internal signals:

- requested service
- budget range
- business type
- current website status
- project description quality

Do not build scoring automation in V1 unless there is enough lead volume to justify it.

13. Deployment

Domain

Keep fikzdev.com registered and managed at Hostinger unless there is a strong reason to move it.

The domain registrar and application hosting do not need to be the same provider.

Recommended V1 deployment

- App: Vercel
- DNS: Hostinger DNS or the chosen DNS provider
- Database: Supabase
- Email delivery: Resend
- Spam protection: Cloudflare Turnstile

Deployment stages

Local

Developer machine and Cursor.

Preview

Vercel preview deployments for testing.

Preview environments should not be indexed by search engines.

Production

<https://fikzdev.com>

Choose one canonical hostname policy and redirect the alternate hostname.

Example:

- canonical: ``https://fikzdev.com``
- redirect: ``https://www.fikzdev.com` -> canonical`

Or the reverse, but never allow both to behave as independent copies.

Before DNS switch

- Production build passes
- Environment variables set
- Sitemap correct
- robots correct
- canonical URLs correct
- form submission tested
- email notification tested
- mobile QA completed
- security headers checked
- staging noindex verified
- redirects prepared if replacing an existing site

Migration caution

If an existing fikzdev.com site has indexed URLs, inventory them before launch and create 301 redirects to the most relevant new URLs.

Never delete indexed URLs blindly.

Rollback

Keep previous deployment available until the new production deployment is verified.

14. QA Checklist

A page is not done until relevant checks pass.

Functional

- All links work
- Navigation works
- Mobile menu works
- Forms submit successfully
- Error states work
- Email notification works
- WhatsApp links open correctly
- No console errors

Responsive

Test at:

- 320px
- 360px
- 390px
- 430px
- 768px
- 1024px
- 1280px
- 1440px
- 1920px

Check:

- No horizontal overflow
- No clipped headings
- Cards stack correctly
- Forms fit viewport
- Sticky elements do not cover content
- Long Bahasa Melayu copy wraps properly

SEO

- Unique title
- Unique meta description
- One clear H1
- Canonical correct
- Indexing directive correct
- Internal links present
- Structured data valid where used
- Images have appropriate alt text
- Page appears in sitemap if indexable

Performance

Core Web Vitals reference:

<https://web.dev/articles/vitals>

Test production-like build.

Use Lighthouse as a lab diagnostic but do not treat a lab score as the only measure of user experience.

Check:

- LCP element
- CLS causes
- excessive JavaScript
- image sizing
- font loading
- third-party scripts

Accessibility

- Keyboard navigation
- Visible focus
- Contrast
- Labels
- Error messages
- Semantic controls
- Reduced motion

Security

- No secrets in client bundle
- Server validation enabled
- Rate limit active for forms
- Turnstile verified server side
- Headers present
- HTTPS only
- Sensitive logs avoided

Content

- No fake claim
- No AI slop phrase
- No unnecessary em dash in public copy
- No keyword stuffing
- CTA is clear
- Pricing wording is transparent
- No broken placeholder text

Release gate

Do not deploy to production if a critical issue exists in:

- lead submission

- security
- mobile usability
- canonical or indexing configuration
- production domain routing

15. Roadmap

Phase 0: Discovery and foundation

Objective: lock rules before design and coding expand.

Deliverables:

- Project documents
- Cursor rules
- Sitemap
- Positioning
- Initial pricing
- Homepage copy

Acceptance:

- No major ambiguity about service positioning
- Public tone approved
- Architecture approved

Phase 1: Technical foundation

Build:

- Next.js project
- TypeScript
- Tailwind
- base layout
- metadata defaults
- design tokens
- header and footer
- environment validation

Acceptance:

- Production build passes
- Responsive shell works
- No unnecessary dependencies

Phase 2: Homepage

Build homepage only.

Acceptance:

- Copy feels human
- Hero is clear
- Primary CTA obvious
- Mobile experience strong
- No fake social proof

Phase 3: Conversion infrastructure

Build:

- Contact page
- Lead form
- Supabase storage
- Resend notification
- Turnstile
- Rate limiting
- thank-you state

Acceptance:

- Valid enquiry saved
- Invalid and spam submissions handled safely
- No secrets in browser

Phase 4: Core commercial pages

Build:

- Services hub
- Website development
- WordPress and Elementor
- Custom website
- SEO
- Maintenance
- Domain and hosting
- Pricing

Acceptance:

- Every page has clear intent
- No duplicate copy
- Internal links complete

Phase 5: Trust and content

Build:

- About
- Projects
- Concept projects clearly labelled
- FAQ expansion
- Initial guides

Suggested first guides:

42. Berapa Harga Buat Website di Malaysia?
43. WordPress atau Custom Website, Mana Lebih Sesuai?
44. Berapa Lama Masa Diperlukan Untuk Siapkan Website?
45. Apa Yang Perlu Disediakan Sebelum Buat Website?
46. Domain dan Hosting Itu Apa?
47. Kenapa Website Lambat?
48. Website Tidak Keluar di Google, Apa Puncanya?
49. SEO Ambil Masa Berapa Lama?
50. Berapa Kos Maintenance Website?

Phase 6: Local SEO foundation

Build /kawasan hub and a small number of high-quality local pages.

Start with areas where FikzDev can write genuinely useful content.

Do not scale until Search Console data supports expansion.

Phase 7: Launch

- final QA
- Search Console
- sitemap submission
- analytics
- backups
- monitoring
- production DNS

Phase 8: First 90 days

Review:

- queries
- impressions
- CTR
- conversions
- page engagement
- lead quality

Improve pages already receiving search visibility before publishing dozens of new pages.

Phase 9: Expansion

Only after real data:

- more local pages
- more guides
- case studies
- English version
- richer lead workflow
- recurring client tools

16. Homepage Copy Draft

This is a working copy draft. It may be refined after visual layout and keyword research. Do not add hype or unverified claims during implementation.

Hero

Eyebrow:

Website untuk bisnes di Malaysia

H1:

Website yang laju, kemas dan senang pelanggan faham

Body:

FikzDev membantu bisnes membina website yang profesional, mesra Google dan mudah membawa pelanggan kepada tindakan. WordPress atau custom website, kami cadangkan berdasarkan apa yang bisnes anda betul-betul perlukan.

Primary CTA:

Dapatkan Cadangan dan Harga

Secondary CTA:

Lihat Servis

Trust note:

Tiada pakej yang dipaksa. Skop, pilihan dan kos diterangkan sebelum kerja bermula.

Problem section

Heading:

Website patut memudahkan pelanggan, bukan menambah masalah

Body:

Ramai pemilik bisnes tidak perlukan sistem yang rumit. Mereka perlukan website yang cepat dibuka, jelas menerangkan servis, nampak baik pada telefon dan senang dihubungi bila pelanggan sudah bersedia.

Kami mula dengan keperluan sebenar bisnes anda. Kalau WordPress sudah memadai, itu yang kami cadangkan. Kalau projek perlukan kawalan atau fungsi yang lebih custom, barulah kami bincangkan custom development.

Services intro

Heading:

Pilih bantuan yang anda perlukan

WordPress dan Elementor

Untuk bisnes yang perlukan website profesional, mudah dikemas kini dan practical untuk kegunaan harian.

CTA: Lihat Servis WordPress

Custom Website

Untuk projek yang perlukan performance, design control atau fungsi yang lebih khusus tanpa bergantung kepada page builder.

CTA: Lihat Custom Website

SEO

Kami bantu kemaskan struktur, technical SEO dan content supaya search engine lebih mudah memahami website anda. Tiada janji ranking nombor satu.

CTA: Lihat Servis SEO

Website Maintenance

Untuk bisnes yang tidak mahu pening dengan update, bug, backup dan penjagaan teknikal website.

CTA: Lihat Maintenance

Domain dan Hosting

Kami boleh bantu daftar domain, sediakan hosting dan urus perkara teknikal yang dipersetujui supaya semuanya lebih tersusun.

CTA: Lihat Domain dan Hosting

WordPress vs Custom

Heading:

Tak pasti WordPress atau custom website?

Body:

Kedua-duanya boleh jadi pilihan yang baik. Yang penting ialah pilih berdasarkan keperluan, bajet, cara website akan diurus dan fungsi yang anda perlukan.

WordPress biasanya sesuai jika anda mahu CMS yang mudah digunakan dan banyak fungsi standard.

Custom website lebih sesuai jika anda perlukan kawalan lebih tinggi terhadap interface, performance atau integrasi tertentu.

CTA:

Ceritakan Keperluan Projek

Why FikzDev

Heading:

Kami cuba buat perkara teknikal jadi lebih mudah

Points:

Skop dijelaskan awal

Anda tahu apa yang termasuk sebelum projek bermula.

Tak tambah fungsi tanpa sebab

Kalau sesuatu fungsi belum diperlukan, kami akan beritahu.

Dibina untuk semua peranti

Mobile bukan versi kedua. Website dirancang supaya boleh digunakan dengan baik pada skrin kecil dan besar.

SEO bermula dari struktur

Kami tidak tunggu website siap baru fikir tentang title, heading, internal link dan technical setup.

Boleh dijaga selepas launch

Maintenance, domain dan hosting boleh diuruskan supaya anda tidak perlu menyelesaikan semuanya sendiri.

Process

Heading:

Cara projek berjalan

Step 1:

Ceritakan apa yang anda perlukan

Step 2:

Kami cadangkan skop dan pilihan yang sesuai

Step 3:

Design dan development

Step 4:

Semakan dan pembetulan yang dipersetujui

Step 5:

Launch dan sokongan selepas siap mengikut pakej

Pricing

Heading:

Harga permulaan yang mudah difahami

Landing page:

Dari RM800

WordPress business website:

Dari RM1,500

Custom website:

Dari RM2,500

SEO:

Dari RM800 sebulan

Maintenance:

Dari RM199 sebulan

Note:

Harga sebenar bergantung kepada skop, bilangan halaman, fungsi, integrasi dan keperluan content. Sebelum kerja bermula, kami akan terangkan apa yang termasuk dan kos tambahan jika ada.

Portfolio state

Heading:

Apa yang kami boleh bina

Body:

FikzDev sedang membina koleksi projek dan case study. Sementara itu, anda boleh lihat projek konsep yang menunjukkan cara kami menyusun design, content dan pengalaman pengguna untuk beberapa jenis bisnes.

All concept work must be labelled clearly.

FAQ

Berapa harga buat website?

Harga bergantung kepada skop. Untuk panduan awal, landing page bermula dari RM800, WordPress business website dari RM1,500 dan custom website dari RM2,500.

WordPress atau custom website lebih baik?

Tiada satu jawapan untuk semua bisnes. WordPress biasanya lebih practical jika anda mahu CMS dan fungsi standard. Custom development lebih sesuai apabila projek perlukan kawalan, performance atau fungsi khusus. Kami akan cadangkan berdasarkan keperluan anda.

Adakah SEO termasuk?

Asas technical dan on-page SEO akan dibincangkan dalam skop website. Servis SEO berterusan ialah servis berasingan kerana ia melibatkan kerja selepas launch dan bergantung kepada persaingan serta sasaran carian.

Boleh urus domain dan hosting sekali?

Ya. Kami boleh bantu pendaftaran domain dan managed hosting. Kos renewal dan skop pengurusan akan diterangkan sebelum anda setuju.

Berapa lama website siap?

Tempoh bergantung kepada skop, content dan kelajuan feedback. Tempoh sebenar perlu diberikan selepas requirement projek difahami supaya kami tidak memberi janji yang tidak realistik.

Final CTA

Heading:

Ada website yang nak dibina atau dibaiki?

Body:

Ceritakan keadaan sekarang dan apa yang anda mahu capai. Kami akan bantu cadangkan langkah yang practical tanpa memaksa anda ambil perkara yang belum diperlukan.

Primary CTA:

Hantar Keperluan Projek

Secondary CTA:

WhatsApp FikzDev

17. Cursor Operating Rules

You are working on the official FikzDev website at fikzdev.com.

Before changing code, content, architecture or SEO, read the relevant documents in /docs and the rules in /.cursor/rules.

Non-negotiable project goals

- Primary language is Bahasa Melayu for Malaysia.
- Generate qualified enquiries, not vanity traffic.
- Keep the website fast, clear, secure and easy to maintain.
- Use natural Malaysian Bahasa Melayu. Keep common terms such as website, SEO, WordPress, hosting and domain when they sound more natural.
- Do not use generic AI marketing language.
- Do not invent testimonials, customer logos, awards, project numbers, revenue, rankings or years of experience.
- Do not promise guaranteed rankings on Google.
- Do not create thin or near-duplicate location pages.
- Do not create features that are not required by the current implementation phase.
- Do not introduce large dependencies without a clear reason.
- Prefer Server Components and static rendering where appropriate.
- Validate all externally supplied data on the server.
- Never expose secrets or privileged Supabase keys to the browser.
- Accessibility, performance and security are part of the definition of done.

Required workflow

51. Identify the requested change.
52. Read the relevant project documents.
53. Explain the planned implementation before major changes.
54. Make the smallest maintainable change that solves the problem.
55. Run lint, type checks and tests.
56. Check mobile and desktop layouts.
57. Check SEO metadata when a public page changes.
58. Check accessibility when UI changes.
59. Check security when forms, APIs, auth, database or third-party scripts change.
60. Summarise what changed and any remaining risks.

Public copy rule

Never publish placeholder marketing claims. If evidence is missing, use transparent wording instead of pretending credibility.

Bad:

"Dipercayai oleh 100+ syarikat di Malaysia."

Good:

"Ceritakan apa yang bisnes anda perlukan. Kami akan cadangkan pilihan yang praktikal dan terangkan skop sebelum kerja bermula."

18. Master Prompt untuk Cursor

You are the lead technical architect, UI UX designer, SEO engineer, security engineer and senior Next.js developer for fikzdev.com.

Do not write production code yet.

First read:

- `AGENTS.md`
- every relevant file inside `/docs`
- all rules inside `./cursor/rules`

Then produce a reviewed implementation plan.

Project

Brand: FikzDev

Domain: <https://fikzdev.com>

Primary market: Malaysia

Primary language: Bahasa Melayu

English will be added in a future phase. Do not implement English now.

Business services

61. WordPress and Elementor website development
62. Custom coded website development
63. SEO services
64. Website maintenance
65. Domain registration and management
66. Managed website hosting

Primary business goal

Generate qualified enquiries and build sustainable organic search visibility in Malaysia.

Experience principles

The website must be:

- simple
- minimalist
- fast
- responsive
- accessible
- secure
- SEO friendly
- transparent
- conversion focused

Do not create unnecessary complexity.

Copy principles

Use natural Malaysian Bahasa Melayu for public content.

Keep common English web terms where natural.

Do not use AI slop, exaggerated marketing language or invented credibility.

Do not use em dashes in public copy.

Do not promise guaranteed Google rankings.

Explain trade-offs honestly.

SEO principles

Use a clear hierarchy of service pages, guides and later high-quality location pages.

Do not generate hundreds of thin location pages.

Do not keyword stuff.

Do not create near duplicate pages that only change city names.

Tech direction

Use:

- latest secure stable release within Next.js 16.x Active LTS
- TypeScript
- App Router
- Tailwind CSS
- Server Components where practical
- Zod
- Supabase for lead storage
- Resend for transactional email
- Cloudflare Turnstile

Keep dependencies minimal.

Required planning output

Before coding return:

67. Recommended application architecture
68. Folder structure
69. Component architecture
70. Route architecture
71. Content model
72. SEO architecture
73. Local SEO publishing rules
74. Metadata and structured data plan
75. Lead generation and form flow
76. Supabase data model for leads
77. Security controls
78. Performance strategy
79. Responsive design strategy

80. Accessibility strategy
81. Testing strategy
82. Deployment architecture
83. Migration considerations for any existing fikzdev.com URLs
84. Implementation phases based on `docs/ROADMAP.md`
85. Acceptance criteria for every phase
86. Risks and how to reduce them

Do not implement the entire site in one pass.

After the plan is approved, implement one phase at a time and run the QA checklist before moving forward.

19. Rujukan Rasmi

- **Google Search Central - SEO Starter Guide:**
